

ANANDA LUKMAN RAMADHAN

Kalideres, West Jakarta | +62 8811-8234-75 | anandalukman01@gmail.com | [linkedin.com/in/anandalukmanramadhan](https://www.linkedin.com/in/anandalukmanramadhan) | github.com/NandaCoba

PROFESSIONAL SUMMARY

Graduate of SMK Mutiara Bangsa, majoring in Computer Network Engineering, currently pursuing a degree in Informatics Engineering at Universitas Pamulang. Skilled in website and application development, with a specialization in Backend Engineering, and hands-on experience building frontend interfaces with Vue.js and Nuxt.js. Experienced in building efficient, scalable, and well-structured backend systems using Golang, Express.js, NestJS, and TypeScript, with working knowledge of cloud computing (AWS) and microservice architecture. Capable of developing APIs, managing databases, and designing reliable backend and frontend architectures tailored to user needs. Possesses strong ability to work both independently and collaboratively within a team, consistently striving to deliver optimal solutions in every software development project.

EDUCATION

SMK Mutiara Bangsa — Jakarta, Indonesia

Sep 2020 – Jan 2024

Computer Network Engineering

- Focus: Computer Networking

Universitas Pamulang (S.Kom) — Jakarta, Indonesia

Sep 2025 – Present

Informatics Engineering

- Focus: Programming, Computer Networking

TECHNICAL SKILLS

Frontend: HTML, CSS (Tailwind), JavaScript, React.js, Vue.js, Nuxt.js

Backend: Node.js, Express.js, NestJS, TypeScript, Golang, Gin Gonic, RESTful APIs

Databases: MySQL, PostgreSQL

Cloud & DevOps: AWS (EC2, S3, Lambda), CI/CD Pipeline, Docker

Architecture: Microservice, MVC, Hexagonal, Clean Code

Tools & Workflow: Git, GitHub, Prisma ORM, Sequelize, JWT, OAuth

PROFESSIONAL EXPERIENCE

WinTech — Jakarta, Indonesia

Aug 2025 · Jul 2026

Software Development Company

Junior Software Engineer

Aug 2025 · Jul 2026

- Built and maintained backend applications using TypeScript with the NestJS framework, delivering modular, scalable, and easily maintainable systems.
- Designed and implemented microservice architecture to separate service domains, improving scalability and the independence of each service.
- Integrated AWS services (EC2, S3, Lambda) to support infrastructure, storage, and serverless computing needs.
- Built and maintained RESTful APIs along with inter-service communication using message brokers and event-driven architecture.
- Applied clean code principles, dependency injection, and design patterns when developing features to maintain code quality and readability.
- Collaborated cross-functionally with frontend, DevOps, and QA teams to ensure smooth system integration aligned with business needs.

PT. Sinergi Merah Putih — Jakarta, Indonesia (Remote)

Jul 2024 – Apr 2025

Solution Integration & Software Development Company

Backend Programmer Intern

Jul 2024 – Apr 2025

- Designed and built RESTful APIs to support frontend and mobile application functionality.
- Developed frontend interfaces using Vue.js and Nuxt.js, contributing to feature delivery beyond the core backend scope.
- Managed and developed database systems (SQL/NoSQL) to store and process application data efficiently.
- Implemented user authentication and authorization using JWT, OAuth, and other security methods.
- Integrated third-party services such as payment gateways, notifications, and cloud services.
- Optimized server performance and database queries to ensure system speed and scalability.
- Authored API documentation to ensure clarity for frontend teams and other collaborators.

- Applied clean code principles and modular architecture (such as MVC or Hexagonal) to maintain code quality and readability.
- Conducted thorough backend debugging and testing (unit tests, integration tests) to ensure system stability.
- Managed and executed deployment processes using CI/CD pipelines to accelerate application delivery to production.
- Maintained application security against common threats such as SQL injection, XSS, and CSRF.
- Worked closely with frontend, mobile, and DevOps teams to align feature development.

RSUD Cengkareng — Jakarta, Indonesia

Jan 2023 – Mar 2023

B2B Integrated Commodities Ecosystem Services in Indonesia

IT Support

Jan 2023 – Mar 2023

- Provided technical support for hardware and software, ensuring all devices ran optimally and met operational needs.
- Performed installation, configuration, and maintenance of operating systems, applications, and internal company networks.
- Handled user support requests via ticketing system or direct assistance, including troubleshooting network, printer, and application issues.
- Performed routine updates, security patches, and data backups to maintain system security and integrity.
- Collaborated with the development team to test and ensure compatibility of new systems or applications before release.
- Created documentation for software and hardware usage, as well as troubleshooting guides to streamline issue resolution.

PROFESSIONAL EXPERIENCE PROJECTS

Curcool — curcool.com

Full-stack Developer

Jul 2024 – Jul 2025 (~1 Year)

Curcool is an online mental-health counseling/venting platform connecting users with counselors ("Listy") for one-on-one sessions.

- Developed and maintained the backend using Express.js for a full year, covering session scheduling, counselor (Listy) selection, ticket-based session purchases, and user account management.
- Built and maintained the frontend using Vue.js and Nuxt.js, delivering a responsive booking flow, pricing/ticket pages, and content pages (blog, FAQ, partner pages).
- Worked across the full stack for one year through multiple iterations, from initial feature builds to ongoing bug fixes, performance improvements, and new feature rollouts based on user feedback.
- Integrated payment and promo/referral code handling to support the platform's ticket-based session purchase flow.
- Collaborated with product and counseling partners to ensure the platform delivered a safe, easy-to-use, and judgment-free experience for users.

Axion Center — Axion Team

Full-stack Developer

Axion is a SaaS startup I founded, building digital products to support business operations.

- Designed and built the backend using NestJS (TypeScript) with a modular architecture to support Axion Center's operational needs.
- Managed PostgreSQL databases and designed efficient, well-structured data schemas to support system scalability.
- Implemented Redis for caching and a message queue system to improve performance and efficiently handle asynchronous processes.
- Built the frontend interface using TanStack for responsive data fetching and state management.
- Containerized the application using Docker and configured Nginx as a reverse proxy for stable deployment.
- Collaborated with the Axion team on end-to-end system architecture, covering backend, frontend, and deployment infrastructure.

Axion Console — Axion Team

Full-stack Developer

- Built a console dashboard using NestJS and TypeScript to support centralized system management and monitoring.
- Designed and managed PostgreSQL databases to store configuration data, activity logs, and user information in a structured manner.
- Implemented a queue system and Redis to efficiently handle background jobs and data caching.
- Developed an interactive frontend using TanStack for data tables, queries, and state synchronization.
- Handled deployment using Docker and Nginx to ensure a consistent environment between development and production.
- Worked with the Axion team to define console feature requirements and ensure smooth integration with other services.

Bearorder — Axion Team

Full-stack Developer

- Designed and built a no-queue food ordering application (self-order system) using NestJS and TypeScript on the backend.

- Developed real-time ordering features and digital queue management so customers could order food without physically waiting in line.
- Managed PostgreSQL databases to efficiently store menu data, transactions, and order history.
- Implemented Redis and a queue system to handle real-time order notifications and background processes.
- Built the ordering interface using TanStack for responsive data fetching and order updates.
- Containerized the application with Docker and configured Nginx to support scalable, stable deployment.
- Collaborated with the Axion team across backend, frontend, and infrastructure to deliver a fast and efficient ordering experience.

Axion WMS (Warehouse Management System) — Axion Team

Full-stack Developer

- Designed and built a Warehouse Management System (WMS) for Axion, using NestJS (TypeScript) with a modular architecture to manage warehouse operations.
- Developed modules for stock management, goods receiving, and goods dispatch to support real-time warehouse tracking.
- Managed PostgreSQL databases and designed structured schemas to store inventory data, storage locations, and warehouse transaction history.
- Implemented Redis for caching and a message queue system to efficiently handle background jobs and asynchronous warehouse processes.
- Built the frontend interface using TanStack for responsive data tables, inventory views, and real-time stock updates.
- Containerized the application using Docker and configured Nginx as a reverse proxy for stable deployment.
- Collaborated with the Axion team on end-to-end system architecture, covering backend, frontend, and deployment infrastructure.

Storra (Warehouse Management System) — WinTech

Backend Developer

- Handled the backend for Storra, a Warehouse Management System (WMS), using NestJS and TypeScript to manage warehouse operations.
- Designed and implemented modules for stock management, goods receiving, and goods dispatch in real time.
- Managed PostgreSQL databases to store inventory data, storage locations, and warehouse transaction history in a structured manner.
- Designed the backend architecture using a microservice approach so each WMS module could be developed and scaled independently.
- Integrated AWS services to support infrastructure and data storage needs for the system.
- Collaborated with frontend and product teams to ensure WMS features met warehouse operational requirements.

AI Travel Buddy — Telkomsel

Backend Developer

- Designed and built RESTful APIs using Gin Gonic (Golang) to support various features of a translation application.
- Developed a backend system supporting real-time translation between two users in a live conversation.
- Implemented a general text translation service similar to Google Translate, delivering fast and accurate responses.
- Integrated camera-based translation features (image-to-text translation) to automatically translate text from images.
- Managed and optimized SQL/NoSQL databases to efficiently store conversation history, translation results, and user data.
- Designed a scalable and modular backend architecture for easy development and integration with other Telkomsel services.
- Implemented middleware for logging, authentication, and request validation to maintain service security and performance.

LaaS (Lab as a Service) — Telkomsel

Full-stack Developer

An internal platform for managing and documenting Telkomsel's lab resources and internal projects.

- Designed and built RESTful APIs using Golang to support the LaaS platform, handling documentation and resource data for internal Telkomsel teams.
- Built the frontend using Next.js, providing an interface for uploading, organizing, and searching internal documentation.
- Managed and structured databases to store documentation records, resource metadata, and access history.
- Implemented authentication and role-based access so different internal teams could manage their own documentation securely.
- Worked alongside the AI Travel Buddy team, applying the same modular backend approach to keep both Telkomsel projects consistent and maintainable.
- Collaborated with internal Telkomsel stakeholders to align platform features with their documentation and lab-management needs.
